(subset_players_df['rank_in_league_top_attackers']==-1).sum()

30

Instead of adjusting -1 for the ranking per position, it makes sense to do it across all the relevant columns as there is no place for -1 value

```
def adjusting_Ranks(rank):
    if rank == -1:
        return None
    else:
        return rank
```

now we are dealing with the rank in club top scorer issue

by looking at the watford team, we try and investigate why there are -1 in that column

```
cleaning_top_scorers=player_stats.loc[player_stats['Current Club'] ==
'Watford', 'full_name':'rank_in_club_top_scorer']
```

```
cleaning_top_scorers.head()
```

[5 rows x 43 columns]

We are going to have a look at some_data and try and clean it

```
matches_test=stats_from_matches.loc[0:20,'home_team_goal_timings':'away_team_goal_timings']
```

```
matches_test
```

| | home_team_goal_timings | away_team_goal_timings |
|----|------------------------|------------------------|
| 0 | 3,83 | 90'2 |
| 1 | 11 | 8,18 |
| 2 | 24,90'1 | NaN |
| 3 | NaN | 41,79 |
| 4 | NaN | 34,45,80 |
| 5 | 35,54 | NaN |
| 6 | 44,80 | 17,67 |
| 7 | 19,45'2,53,88 | NaN |
| 8 | NaN | NaN |
| 9 | NaN | 14,64 |
| 10 | NaN | NaN |
| 11 | 15,31 | 54 |
| 12 | 29,45 | NaN |
| 13 | 43,74,77 | 52 |
| 14 | 33 | 60,66 |
| 15 | 9,20,81 | 37,41 |
| 16 | 6 | 3,48,51 |
| 17 | 25,31,35,48,75,84 | 43 |
| 18 | 25,27,44 | 34,90'5 |
| 19 | NaN | 45,90'3 |
| 20 | 57 | 69 |

#okay so we see that there are some NaN's- as there were no goals scored-thing is those matches are still useful sp we can keep that data

#What we dp want to focus is splitting those values into commas into different columns

```
stats_from_matches.home_team_goal_count.max()
```

```
6
```

#max of 6 goals

#so we want to split the home_goal_timings, first we use a test dataset

```
matches_test_2=matches_test["home_team_goal_timings"].str.split(",",n=6,expand=True)
```

```
matches_test_2
```

| | 0 | 1 | 2 | 3 | 4 | 5 |
|---|-----|-----|------|------|------|------|
| 0 | 3 | 83 | None | None | None | None |
| 1 | NaN | NaN | NaN | NaN | NaN | NaN |

| | | | | | | |
|----|-----|------|------|------|------|------|
| 2 | 24 | 90'1 | None | None | None | None |
| 3 | NaN | NaN | NaN | NaN | NaN | NaN |
| 4 | NaN | NaN | NaN | NaN | NaN | NaN |
| 5 | 35 | 54 | None | None | None | None |
| 6 | 44 | 80 | None | None | None | None |

We can see that Arsenal and Liverpool overscored as did Burnley

So what this shows, is the teams difference between the actual goals and the expected- i.e showing the team who were most clinical

#Can see that arsenal and liverpool overscored interesting, arguably showing that they did better than they were supposed to

teams who scored the least, were also the least clinical, which is unsurprising- but interesting to note chelsea's position, who were 6th in terms of goals scored but 11th in this ranking

#Effectively those who were positive overachieved and those with negative ranking underachieved

Now I want to see breakdown of goals by position grouped by the teams

| 0 | AFC Bournemouth | 30 |
| 7 | Everton | 30 |
| 19 | Wolverhampton Wanderers | 28 |
| 15 | Southampton | 27 |
| 17 | Watford | 26 |
| 14 | Newcastle United | 24 |
| 3 | Burnley | 24 |
| 10 | Leicester City | 24 |
| 8 | Fulham | 22 |
| 4 | Cardiff City | 21 |
| 6 | Crystal Palace | 19 |
| 2 | Brighton & Hove Albion | 19 |
| 9 | Huddersfield Town | 10 |

```
overall_teams_2[['common_name','league_position_home']].sort_values(by
='league_position_home',ascending=True)
```

| | common_name | league_position_home |
|----|-------------------------|----------------------|
| 2 | Manchester City | 1 |
| 10 | Liverpool | 2 |
| 0 | Arsenal | 3 |
| 11 | Chelsea | 4 |
| 1 | Tottenham Hotspur | 5 |
| 9 | Manchester United | 6 |
| 5 | Everton | 7 |
| 19 | Wolverhampton Wanderers | 8 |
| 12 | West Ham United | 9 |
| 8 | AFC Bournemouth | 10 |
| 3 | Leicester City | 11 |
| 13 | Watford | 12 |
| 14 | Newcastle United | 13 |
| 7 | Southampton | 14 |

| | | |
|----|------------------------|----|
| 6 | Burnley | 15 |
| 17 | Brighton & Hove Albion | 16 |
| 16 | Fulham | 17 |
| 4 | Crystal Palace | 18 |
| 15 | Cardiff City | 19 |
| 18 | Huddersfield Town | 20 |

We can already tell there is a strong correlation between goals_scored at home- let's test it:

perhaps the datatype of the object is wrong

```
overall_teams_2[['goals_scored_home', 'league_position_home']].info()
```

```
<class 'pandas.core.frame.DataFrame'>
RangeIndex: 20 entries, 0 to 19
Data columns (total 2 columns):
#   Column                Non-Null Count  Dtype
---  -
0   goals_scored_home      20 non-null     object
1   league_position_home    20 non-null     object
dtypes: object(2)
memory usage: 448.0+ bytes
```

#Thus we need to convert it

```
overall_teams_2[['goals_scored_home', 'league_position_home']] = overall_teams_2[['goals_scored_home', 'league_position_home']].astype(str).astype(int)
```

```
overall_teams_2[['goals_scored_home', 'league_position_home']].info()
```

```
<class 'pandas.core.frame.DataFrame'>
RangeIndex: 20 entries, 0 to 19
Data columns (total 2 columns):
#   Column                Non-Null Count  Dtype
---  -
0   goals_scored_home      20 non-null     int32
1   league_position_home    20 non-null     int32
dtypes: int32(2)
memory usage: 288.0 bytes
```

```
print(overall_teams_2['goals_scored_home'].corr(overall_teams_2['league_position_home']))
```

```
-0.9048863631679042
```

#Strong correlation between goals_Scored at home and league_position at home

After changing the datatype, we see it has a strong correlation, the negative is also expected as ranking is 1 as highest

```

# I do want to see the correlation in overall league position and
goals_scored_home

overall_teams_2['league_position'].info()

<class 'pandas.core.series.Series'>
RangeIndex: 20 entries, 0 to 19
Series name: league_position
Non-Null Count  Dtype
-----
20 non-null     object
dtypes: object(1)
memory usage: 288.0+ bytes

#we also need to convert it

overall_teams_2['league_position']=overall_teams['league_position'].as
type(str).astype(int)

print(overall_teams_2['goals_scored_home'].corr(overall_teams_2['leagu
e_position']))

-0.8486200049811436

# Still a strong correlation, but unsurprisingly less- teams often are
talked about how strong home advantage is

# Let's look at overall goals vs league position

overall_teams_2['goals_scored']
0      73
1      67
2      95
3      51
4      51
5      54
6      45
7      45
8      56
9      65
10     89

| 1 | Tottenham Hotspur | -12.3 |
| 10 | Liverpool | -14.48 |

We should compare those the graphs between the actual goals conceded and xtra goals conded overall

Here we can see the extremes of the dataset, HUddersfiled conceded much more goals than expected- 25% of the goals that they conceded

whle liverpool overperformed defensively and so did spurs

#Man utd and brighton's defence was as expected

We don't really need to group goals_conceded as that is the same as goals_scored

So what's next, # correlation maybe

So we know expected goals, expected goals against

CNa we combine them?

```
overall_teams_2['g_conc_vs_xga']=overall_teams_2['g_conc_vs_xga'].astype(str).astype(float)
```

Okay let;s deice what correlations we want to d0?

#First, we'll do correlation between

```
print(overall_teams_2['goals_conceded'].corr(overall_teams_2['league_position']))
```

```

#Cardiff conceded more goals at home they were supposed to, considerably

Arsenal conceded less goals at home, than they were supposed to- i.e they're defence appears better than it actually is

City is most impressivec,not only did they concede the lear but it was expected

clean_stats_from_matches=completed_stats

So similat to above with the value_counts, let's find out how many clean sheets, how mny times they concede,1,2,3,4,5,6 uniquely, have to put it as away

testing_dist_goal_conc_home=completed_stats.groupby('home_team_name', as_index=False)['away_team_goal_count'].value_counts()

```

I guess it would be the same as the away goal scoring, is equivalent to the home_goal_conceding account and vice versa

this the away_goal_conc_coubnt is equivalent to the hometeam scoring

i.e we have those graphs matplotlib lib to check that

We want to find expected win/loss and also how many points they should've ended up with

We can use this as an example to test how the xg model was wrong

This is where we start the xg properly - things before this should be gotten rid of

[20 rows x 254 columns]

the data already has points per game away and home, to be fair we did do wins, home wins, awya, draws, draws_away ish

we merge the overall_teams and stats_from_matches, to get xw & xl in the eyes of the home_team

overall_teams_2

#Initl insights

Inisghts from the home_table

Arsneal overperformed, as did bournemouth, burnely

Leicester underperformed, as did Newcastle and Crystal Palace

```
print(ov_new_league_tab_h['league_position_home'].corr(ov_new_league_t
ab_h['exp_rank']))
```

0.7969924812030074

Now we want to replicate this for the away_table

```
away_teams_merge=overall_teams_2[['common_name','xg_against_avg_home',
'xg_for_avg_home']].copy()
```

```
away_teams_merge['away_team_name']=overall_teams_2['common_name']
```

```
away_teams_merge.drop(columns='common_name',inplace=True)
```

```
away_merge=pd.merge(away_teams_merge,stats_from_matches,how='outer',on
='away_team_name')
```

```
all_teams_away=away_merge[['Game
Week','away_team_name','home_team_goal_count','xg_for_avg_home','team_
a_xg','team_b_xg','away_team_goal_count']].copy()
```

```
all_teams_away.head()
```

```
Game Week away_team_name home_team_goal_count xg_for_avg_home
team_a_xg \
```

| | | | | |
|------|----|---------|---|-----|
| 0 | 2 | Arsenal | 3 | 1.6 |
| 2.47 | | | | |
| 1 | 4 | Arsenal | 2 | 1.6 |
| 1.49 | | | | |
| 2 | 5 | Arsenal | 1 | 1.6 |
| 0.70 | | | | |
| 3 | 8 | Arsenal | 1 | 1.6 |
| 1.53 | | | | |
| 4 | 10 | Arsenal | 2 | 1.6 |
| 1.62 | | | | |

| | team_b_xg | away_team_goal_count |
|---|-----------|----------------------|
| 0 | 1.61 | 2 |
| 1 | 2.35 | 3 |
| 2 | 1.09 | 2 |
| 3 | 1.56 | 5 |
| 4 | 0.90 | 2 |

```
all_teams_away['away_result']=all_teams_away['away_team_goal_count']-
all_teams_away['home_team_goal_count']
```

```
all_teams_away['x_goal_diff']=all_teams_away['team_b_xg']-
all_teams_away['team_a_xg']
```

```
all_teams_away.head()
```

| | Game Week | away_team_name | home_team_goal_count | xg_for_avg_home |
|-------------|-----------|----------------|----------------------|-----------------|
| team_a_xg \ | | | | |
| 0 | 2 | Arsenal | 3 | 1.6 |
| 2.47 | | | | |
| 1 | 4 | Arsenal | 2 | 1.6 |
| 1.49 | | | | |
| 2 | 5 | Arsenal | 1 | 1.6 |
| 0.70 | | | | |
| 3 | 8 | Arsenal | 1 | 1.6 |
| 1.53 | | | | |
| 4 | 10 | Arsenal | 2 | 1.6 |
| 1.62 | | | | |

| | team_b_xg | away_team_goal_count | away_result | x_goal_diff |
|---|-----------|----------------------|-------------|-------------|
| 0 | 1.61 | 2 | -1 | -0.86 |

| 2 | 1.09 | 2 | 1 | 0.39 |
| 3 | 1.56 | 5 | 4 | 0.03 |
| 4 | 0.90 | 2 | 0 | -0.72 |

now we create a function

although it is a replica of the away function, have labelled it differently to avoid confusion

```

def away_points(x):
    if x>0:
        return 3
    if x==0:
        return 1
    if x<0:
        return 0

all_teams_away['away_points']=all_teams_away['away_result'].apply( lambda
x:away_points(x))

def awa_xg_results(x):
    if x>0.5:
        return 3
    if x>0.5 and x<0.5:
        return 1
    if x<0.5:
        return 0

all_teams_away['xg_away_points']=all_teams_away['x_goal_diff'].apply(l
ambda x: home_xg_Results(x))

all_teams_away.head()

```

| | Game Week | away_team_name | home_team_goal_count | xg_for_avg_home |
|-------------|-----------|----------------|----------------------|-----------------|
| team_a_xg \ | | | | |
| 0 | 2 | Arsenal | 3 | 1.6 |
